# **CERC Accomplishments**

- Awarded over \$15 million in contracts and grants over the past 10 years.
- Developed the nation's first 20,000 watt solar / electric charging station for electric vehicles.
- Achieved a world record efficiency (15.8%) for thin film cadmium telluride solar cells for low cost applications.
- Developed the Rivolta Isigo neighborhood electric vehicle.
- Created a mobile data acquisition system for the U.S. Department of Energy EV Site Operator Program.
- Constructed a microturbine power plant fueled by landfill gas at the Hillsborough Heights Landfill in Tampa.
- Developed photocatalytic technology for detoxification and disinfection of water and indoor air.

Clean Energy Research Center
College of Engineering
University of South Florida
4202 E. Fowler Ave., ENB 118
Tampa, FL 33620

### **KEY RESEARCH PROJECTS**

# **Power Production**

- Photovoltaic (PV) Technology and Systems
- Solar Thermal (CPS) Power for Bulk and Distributed Generation

# **Energy Storage**

- Thermal Storage for Utility Scale Applications
- Ultracapacitor and Battery Technology
- Hydrogen Storage in Polymers and Metal Hydrides

# **Smart Grid Power Systems**

- Renewable Energy (RE) Grid Integration
- Microgrid Management
- Power System Dynamics and Simulation
- Smart Grid Control, Computing and Communications

# **Photocatalytic Technologies**

 Detoxification and Disinfection of Water and Air

# **Water Production**

Solar water desalination and Distillation

# **Advanced Technologies**

- Antenna Solar Energy Conversion
- Combined Power/Cooling Thermodynamic Cycle
- ◆ Thermochemical Production of Liquid Fuels from Biomass
- Carbon Capture and Sequestration

# **Transportation Technologies**

- Electric/Hybrid Vehicles
- Energy Management

New ,environmentally clean energy sources and systems for the world.

# CLEAN ENERGY RESEARCH CENTER

# Clean Energy Research Center . . . Clean energy is green and renewable.

# **CERC Mission**

Florida has no substantial indigenous supply of fossil fuels. As a result, the state must import virtually all of the energy it uses. However, Florida (known as the Sunshine State) does have abundant solar and biomass resources. Solar and hydrogen resources and technologies, applied both electrically and thermally, can mitigate fossil fuel dependency, improve the environment, and provide the opportunity for substantial economic growth.

energy producers and the transportation sector, supports

the economic development of manufacturing and high technology business-

Reaching for the Sun

es, and the nation's goal of global competitiveness and technology leadership.

CERC is involved in fundamental investigations into new environmentally clean energy sources and systems — hydrogen, fuel cells, solar energy conversion and biomass utilization — that meet the needs of both the electric power and transportation sectors.

# Smart Grid Power Systems

A new thrust area for CERC is "Smart Grid Power Systems" (SPS) which aims to train the next generation of power professionals by promoting excellence in electric power education and research, by developing enabling smart grid technologies. SPS partners include industry, academia, and utilities.

# **SPS** research includes:

- control, communications and computing in smart grids;
- renewable energy grid integration;
- smart microgrids energy management;
- energy delivery technologies (HVDC, HVDC-light);
- power systems dynamics and simulation;
- real-time system monitoring; and demand side response.

### **CERC Scientists**

CERC spans the Engineering departments of Electrical, Chemical and Biomedical, Mechanical, Computer, Materials Science, as well as in the College of Arts and Sciences. Visiting scholars come from around the world to receive specialized training only available at the CERC.

### Directors:

### Lee Stefanakos, Ph.D., P.E.
